                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                                                                                                             The present invention describes an immunogen (1) comprising a peptide (1a) and a carrier (1b) derived from protein D of idecognius influenzae or its fragment. Also described are: (1) a vaccine comprising (1) and an excipient, (2) preparation of (1), comprising conjugating a peptide comprising formulating (1) with an excipient, (1) has optostatio, comprising formulating (1) with an excipient, (1) has optostatio, annulating (1) with an excipient, (1) has optostatio, annulating (1) metopoxective and protostactive of a nedicament for preventing and treating infectious disease such as malaria or chronic disease such as cancer, Alzheimer's disease or alleigy in a patient. Onlike prior art immunogens, (1) induces high levels of antipeptide immunogens while inducing a moderate momeral response against the carrier. The present sequence represents a specifically claimed immunoglobulin E (1gE) epitope immunogenic peptide sequence, which can immunoglobulin E (1gE) epitope immunogenic peptide sequence, which can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           igE C-epsilon-2 domain surface exposed epitope pepilde P3 SEO ID NO:3.

The present invention describes a peptide (I) comprising an isolated surface exposed group/epitope (E.) of C-epsilon-2 domain (2) of immunoglobulin E (19E), or its mimotope. Also described are: (1) an immunoglobulin E (19E), or its mimotope. Also described are: (1) an immunoglobulin E (19E), or its mimotope. Also described are: (1) an immunoglobulin E (19E) a pharmaceurical composition (PC) comprising (IV); (2) a peptide (IA) capable of being recognised by (IV); (6) an immunogen (IS) a peptide (IA) capable of being recognised by (IV); (6) an immunogen (IS) comprising (IA) and (7) producing (III) by producing (IV); (1) can have antialized; and (7) producing (III) by producing (IV); (1) and can be used as a vaccine and histaminosuppressive activities, and can be used as a vaccine and in the manufacture of medicaments for treating as a vaccine and also in menufacturing medicaments for treating and siso in menufacturing medicaments for treating allergies. (I) is useful in diagnostice and in the affinity purification of circulating anti-19E antibodies from blood. (I), (III) and PC are useful for treating apatient susceptible to or suffering from allergies. (IV) is also useful in diagnosing atopy. AAB25907 to AAB2609 repersent peptide sequences which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                  Peptides useful for treating, preventing and ameliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin \Xi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; linkage technology; conjugated compound; carrier vehicle; epitope; Cepsilon3; Cepsilon3; Cepsilon4; immunoglobulin E; IgE mediated disease; antibody response.

                                                                                 The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macrocalecules, polymers, proteins) to produce biological and immunological constructs. Preteins) to produce cological and immunological constructs. The invention provides a protein for use in a pharmaceutical composition or a vacatime. The protein for use in a pharmaceutical composition or a vacatime. The city invention describes peptides derived from or minotopes of the city invention describes peptides derived from or minotopes of the city which are used to produce conjugate of compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protective antibody response in an animal or human pallect cases a protective antibody response in an animal or minotopes of AAU16632-AAU16913 represent peptides derived from or minotopes of
                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a cogrestion computating allergy peptides linked by an inert carrier. The allergy peptides are derived from Immisoglobulin E (1gE) or 19E receptor. The present peptide is one such peptide from 19E. The composition is useful as a valuable for
                         an immunogenic conjugate useful treatment of IgE

The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin E (1gE) suitable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunogen; human; 1gE; immunoglobuiin E; allergy; thio-ether linkage; vaccine; antiallergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The invention provides immunoglobulin E (19E) antiquoists comprising one or role of the fregislonal receptor-binding determinant sites of buran lgE. The antiquographists include 19E Variants comprishing an immunoglobulin template and binding determinant sequences (bds) [Obds, EFRds and the sequence shown in AAV42581. The Obds (C) loop binding determinant sequences shown in AAV42581. The sequences shown in AAV42581 and the EFBds (EF loop binding determinant sequence) are solected from the sequences shown in AAV42578 and sequences shown in AAV42578 472579. The variants are useful in relising and screening anti-19E antibodies, in the isolation and purification of Ecepalional receptor and in the treatment and prophylaxis of allergic
                                                                                                                                                                                                                                                                                                                                                                                      Immunoglobulin B variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (19E) antibodies, in the isolation and purification of PoepsilonRI receptor and in the treatment of allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zemunoglobulin E; IgE; anti-human IgE; bispecifir antibody; FCEL; FCEH;

This sequence represents a fragment of an amino acid sequence encoding a mutant human immunoglobulin E (1gE). The mutant IgE is used to test the binding of IgE to its receptors. The invention relates to a bispecific antibody that binds specifically to IgE when IgE is bound to its low affinity receptor (FCEL), but does not bind to IgE, when IgE is bound to its high affinity receptor (FCEH). The bispecific antibody comprises an IgE-binding arm with human framework residues of a recipient human antibody and donor mutine CDR (complementarity determining region) arithody and donor mutine CDR (complementarity determining region) arithody and donor mutine competition of a recipient human arithody and donor mutine residue. The antibody also comprises an FV that is specific for a predetermined antigen other than IgE. The antibodies work by displacing bonding. The bispecific antibodies are used for diagnosis, treatment and prevention of allergy and other IgE. The antibodies is also, when imminishing for research or therapy). The bispecific antibodies of the invention do not cause therapy. The bispecific antibodies of the invention do not cause
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ·.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                          This sequence represents a fragment of an amino acid sequence encoding a mutant human immunoglobulin E (19E). The mutant 19E is used to test the binding of the anti-19E antibodies of the invention. The invention relates to a bispecific antibody that binds specifically to 19E when 19E is bound to its low affinity receptor (FCEL), but does not bind to 19E, when 19E is bound to its high affinity receptor (FCEL). The bispecific antibody comprises an 19E-binding arm with human framework residues of a recipient human antibody and donor mutine CDR (complementarity determining region) residues, but with at least one human CDR residue replacing the analogous mutine residue. The antibody also corprises an FV that is specific for a predetermined antigen other than 19E. The antibodies work by displacing bound 19E from eight from residence are used for diagnosis, treatment and prevention of allergy and other 19E-mediated for diagnosis, treatment and prevention of allergy and other 19E-mediated for the scalation of FCEL from cells (for research or therapy). The bispecific antibodies of the invention do not release of histamine from must cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Optotoxic T lymphocyte, CTL, tumour, antigen presenting cell, allergy, lupus; autoimmune disease, rheumatoxd arthritis, autoimmune nephritis, psoriasis, AFC, multiple sclerosis, autoimmune thyroxditis, hay fever, inflammatory bowel disease, insulin dependent ulaberes; cell therapy, chohn's disease, allergic Thinitis, graft vorsus hust, disease, asthma, transplant rejection, human, immunoglobulin E, 195.

The invention relates to a method of producing cytotoxic T lymphocytes (CTLs) specific for one or more non-tumour self antigen T cell epitopes. The method involves loading antigen presenting cells (APCS) having class I major histocompatibility complex molecules with the T cell epitopes. T cells with the T cell epitopes. T cells specific for the T cell epitopes. The invention is useful for treating autoimnume nephritis, multiple sclerosis, autoimnume heptritis, multiple sclerosis, autoimnume thyroiditis, insulin dependent diabetes. Croh's disease, inflammatory bowel disease, insulin dependent diabetes, Croh's disease, inflammatory bowel disease, graft versus host disease and transplant rejection and/or allergic asthma and venom allergy. The invention is also useful in cell therapy. The present sequence is human immunoglobulin E (IGE) HiA-A2 peptide motif. This peptide is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunoglobulin E; vaccine; igž; cytotoxic T lymphocyte response; irmune response; major histocompatibility complex; MHC; immunogenic; antiallergic; antiasthmatic; irmunosuppressive; vasotropic; cytostatic; dermatological, antiinflammatory; IgF-mediated condition; food allergy, atopic hyperseistivity condition; allergic atchma; atopic dermatilis; non-atopic hypersensitivity condition; anaphylaxis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying peptides that induce cytotoxic Tlymphocyte, CTL response against 1gE, by identifying peptide eliciting CTL response to IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                            Producing cytotoxic T lymphocytes for treating e.g. autoimmune diseases, comprises culturing CD8+ T cells with antigen presenting cells to activate precursor CD8+ T cells specific for T the cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

The present invention describes a method (MI) for identifying peptides that induce cytotoxic T-lymphocyte (CTL) response agains, immunoplobiling that induce cytotoxic T-lymphocyte (CTL) response immunoplobiling complex (MEC) class I molecule, and conducting to major histocompatibility complex (MEC) class I molecule, and conducting to maintaing (T) for ability to elicit in a mammal a CTL response to naturally processed and presented lgE peptides, where a peptide that induces such a response is identified. Also described are compositions: (C2) comprising at least one immunosemble peptide (I) identified by (MI), cCC) comprising at least one isolated polynucleotide encoding (I); and cCC) comprising at least one isolated polynucleotide encoding (I); and cCC) comprising at least one isolated polynucleotide encoding (I); and cCC) comprising at least one isolated polynucleotide encoding (I); and cCC) comprising at least one isolated polynucleotide encoding (I); and cCC) are able to bind to at least on maturally processed and presented CCC length in a mammal a CTL response to naturally processed and presented CCC length encoding (I) and can be used as inducers of a CTL response against les, and in a mammal of -3 are useful for modulating an IgE mediated condition in a mammal. Preferably, Cl-3 are condition, IgE myeloma in a mammal. Preferably, Cl-3 are condition, igE myeloma in a mammal. Preferably, Cl-3 are the condition, igE myeloma in a mammal. Treferably, cnn-thitis, allergic asthat food allorgies, or atogic dermatical asthat food allorgies, or atogic dermatical asthat food allorgies, or atogic dermatical and an analytical and an analogue and an analytical and an analytical and an analogue and anal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ·.
peptides naturally presented by major histocompatibility complex class

The method involves loading antigen presenting cells (APCs) having class
                                                                                                                                                                                                   23:1063-1075 (1986), which is based on the crystal structure of human igglFc (besenhofer, Blochem. 20:2361-2370 (1981)), a series of murants were designed which could be used to test the binding of human igg to its receptors. These mutants are designated Emut 1-13. The sequence of AAR3325 (amino acids 329-336 of igg - numbering according to Kabat) was replaced by the sequence of AAR3325 (amino acids 329-336 of igg - numbering mutant 13. Whotant 13 shows eve and eve binding to Fc epsilon RI. The mutant igs were transiently expressed in human kidney 293 cells, purified on a mouse anti-human igs antibody affinity column and samples from using SDS-PAGE to ascertain that the mutant proteins were of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              lupus, autoimmune disease, rheumatoid arthritis, autoimmune nephritis, psoriasis, APC, multiple sclerosis, autoimmune thyroiditis, hay fever, inflammatory bowel disease, insulin dependent diabetes, cell therapy, crohm's disease, allergic thinitis; graft versus host disease, asthma, transplant rejection, immunoglobulin E, 19E, antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytotoxic T lymphocyte; CTL; tumcur; antigen presenting cell; allergy;

I major histocompatibility complex molecules with the T cell epitopes, and culturing the CD8+T cells with the APCs to activate precursor CD8+T cells specific of the T cell epitopes. The invention is useful for treating autoimmune for a molutiple sclerosis, attoing a postiasis, lupus, autoimmune nephritis, multiple sclerosis, autoimmune thyroiditis, insulin dependent diabetes, Crohn's disease, inflammatory bowel disease, graft versus host disease and transplant rejection and/or allergic disease such as food allergy, hay fever, allergic thinits, allergic asthma and venom allergy. The invention is also useful in cell therapy. The present sequence is immunoglobulin E [19E] and spent peptide is used in the exemplification of the invention.

Producing cytotoxic T lymphocytes for treating e.g. autoinmane diseases, comprises culturing CD8+ T cells with anti-jen presenting cells to activate precursor CD8+ T cells specific for T the cell epitopes

Example 3; Column 47; 49pp; English.

The invention relates to a method of producing cyclosic T lymphocytes (CTLs) specific for one or more non-tumour self antigen T cell epitopes. The method involves loading antigen presenting cells (APCS) having class I major histocompatibility complex molecules with the T cell epitopes, and culturing the CD8+ T cells with the APCs to activate precursor CD8+ T realing autoimmune disease including rheumacoid arthritis, pseciasis, lupus, autoimmune nephritis, multiple sclerosis, autoimmune thyroiditis, insulin dependent diabetes, Crohn's disease, inflammatory bowel disease, graft versus host disease and transplant rejection and/or allergic

The genes and proteins are useful for eliciting a humanial or velidital immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as resignents for the adjacotion and/or prognosis of cancer, as cocing sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcribts, and as therappeutic agents. The proteins and peptides are useful as sequence is a human leukocyte antigen (HAM) peptide. Used in an example from the invention.
vaccines. Cl-3 can be used for modulating an IGE-mediated condition in a mammal. Cl-3 are useful for modulating an IGE-mediated condition such as IGE-mediated another such as IGE-mediated another such as IGE-mediated anotatopic hypersensition, IGE myeloma in a mammal. Preferably, Cl-3 are useful for treating atopic hypersensitivity conditions (such as allergic rinitis, allergic asthma, food allergies, or atopic dermatilis), non-atopic hypersensitivity conditions (such as allergic asthma, food allergies, or atopic dermatilis), non-atopic hypersentitivity conditions (such as anaphy.axis, and urticaria fixes). The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  structure of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising a substance that modularies the structure of proteins and polynucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting celiular or humbus, immune response
                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Purcer: RS:

J. Physiol. 264, 333-341, 1993

Aprile: Molecular cloning and quantification of CRNA 401 protein encoding Ca2--ATPase
Apreference number: 151892
Apreference number: 151892
Aprecession: 164802
Appending preliminary: translated from GB/EMHI/DDBC
Appender upper mRNA
Appender upper mRNA
Appender 1-8 (RES)
Approser: 1-8 (RES)
Approser: 1-8 (RES)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä
